INFORMAL COMMUNICATION

Examiner,

Attached is a word document containing all of the independent claims, and which shows the Examiner's amendments we propose to have you make. Upon review of the independent claims -- as discussed below -- we believe a majority of the independent claims have language similar to the last limitation in claim 1. As such, we have only added this language to independent claims 5 and 7.

A further example of such language is the language in claim 8, which provides "wherein said register allocator allocates logical registers for instructions in said program to be compiled, and allocates, to physical registers, said logical registers that are live at a procedure call in said program to be compiled are allocated from the bottom of the register stack".

You are hereby authorized to cancel any claims which you will not immediately allow. Based on our conversation this afternoon, I understand that at a minimum, you will immediately allow claims 1-3. If those are the only claims you will immediately allow, we will take the allowance with only those claims.

I will be here at the office (412 741 8400) for a bit if you wish to discuss anything further.

Respectfully,

Stanley Ference

Examiner,

I have finished my family commitments, and have returned to the office. I am typing up further amendments to the independent claims. I have noted, however, that the limitation we discussed in claim 1 seems to appear in a number of the other dependent claims. For example, in claim 4, "upon the calling of the procedure, so long as there is a vacancy in operation resources, copying said registers residing in the register stack, to free registers located at the bottom of said register stack". While the language is different, it seems to say the same thing.

If you would like to call to discuss, I am here. 412 741 8400. I will email again when finished.

Respectfully,

9/17/07

Stanley Ference

Subject: Serial No. 10/063,958 - Please call - 412 741 8400

UNOFFICIAL COMMUNICATION

Examiner,

Attached are proposed amendments to Claims 8, 10, and 11. I wanted to talk with you about the limitation from Claim 1 -- did you want that in all independent claims or just independent method claims. Please call to discuss. If I don't pick up, you can page me through my voicemail -- x 201, opt. 1. I may also be reached through my wife's cell phone -- 412 225 5599 -- she wants me to go to dinner with her.

Respectfully,

Stanley Ference
